Pentecost is May the	14
Interuallum maius, weekes	26
Aduentus Domini, December the	3

A brievenote of the Returnes of the Termes :
with their beginnings and endings this
present yeare 1617.

Hillary Terme beginneth the 23. of January (if it be not Sunday, if Sunday, then it is referred vntill the day following) and endeth the 12. of February, and hath foure Returnes : that is to say,

O ^{ct} abis Hillary, Jan. 20	}	Crastino Purif. Feb. 3
Quind. Hillary, Jan. 27	}	O ^{ct} abis Purif. Feb. 10

Easter Terme beginneth the 7. day of May, and endeth the 2. day of June, and hath five Returnes : that is to say,

Quind. Pasc. May 5	}	Quinque Pasc. May 28
Tres Pasc. May 12	}	Crast. Ascend. May 30
Mense Pasc. May 19	}	

Trinitie Terme beginneth the 20. of June, and endeth the 9. day of July, and hath foure Returnes : that is to say,

Crast. Trinit. June 16	}	Quind. Trinit. June 30
O ^{ct} ab. Trinit. June 23	}	Tres Trinit. July 7

Michaelmas Terme beginneth the 9. day of October, (if it be not Sunday) and endeth the 28. day of November, and hath eight Returnes : that is to say,

O ^{ct} ab. Michael. Octob. 6	}	Crast. Anim. Nouemb. 3
Quind. Mich. Octob. 13	}	Crast. Mart. Nouemb. 11
Tres Michael. Octob. 20	}	O ^{ct} ab. Mart. Nouemb. 18
Mense Mich. Octob. 27	}	Quind. Mart. Nouemb. 25

Note that the Exchequer openeth eight dayes before any Terme begin, except Trinitie Terme, in which it openeth but foure dayes before.

January hath xxxj. dayes.

Warme meates are good,
and cheare the blood :
To bleede or bathe I hold not best.
by them the body may be oppress.

Johnson 1617.

A Prognostication for
this present yeare of our
Lord God, 1617.

Wherein is described a
Celestial figure of the middle Eclipse
of the Moone the 6 day of August
at 7 a clocke and 43 minutes
in the night, 1617.

Also a Description of the foure
Quarters of this yeere of our
Lord God.

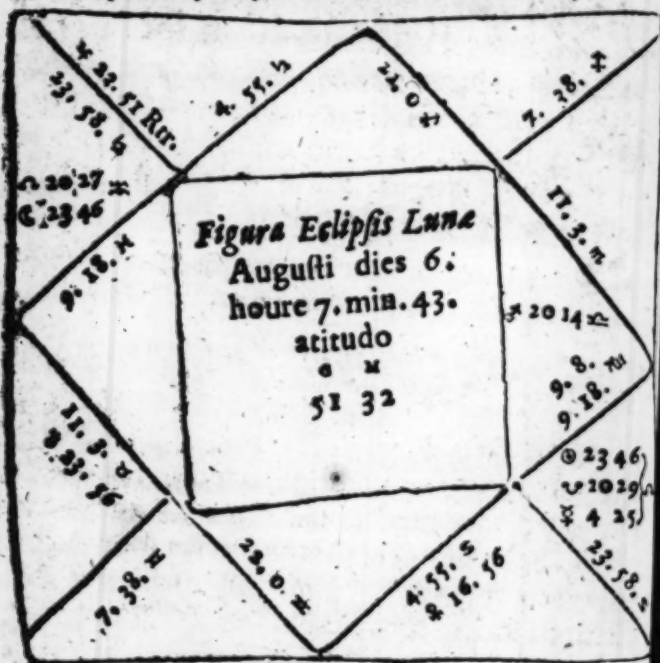

With Predictions of dearth and
plentie, gathered from the dispo-
sitions of the foure Quarters or
Seasons of the yeere; with a de-
scription of the natures of the
foure principall or Cardinall
windes.

¶ Written by *Iohn Johnson,*
Teacher of the Mathematickes in
the Citie of LONDON.

¶ *At London printed for the*
Company of Stationers.

A Prognostication.

A Coelestiall Figure of the middle of the Eclipse of the Moone the sixth day of August, at 7 a clock, and 34 minutes after noone, 1617.

Of the Eclipse of the Moone this yeare of our Lord God 1617.

There will appeare and be sene in our Horizon an Eclipse of the Moone this yeare of our Lord God 1617, the beginning whereof will happen with us at 5 of the clock and 50 minutes after none: the middle

Johnson. 1617.

middle of the Eclipse will be at seven a clocke, and 43 minutes, and the recovering of her full light will happen at eight a clocke and 28 minutes at night.

The continuance of this Eclipse from the beginning to the ending will be 2 hours and 38 minutes, and the pointes Eclipsed are 15 and 47 minutes: the Celestiall figure behold before: on the other side of the leafe. There are this yeare 4 other Eclipses of the Luminaries: but being not to be perceived in our Horizon, I omit them for the observations of those whom they may concerne.

A Description of the foure quarters of this yeare of our Lord God 1617. and first of Winter,

Winter beginneth according to our English accompt in the yeare last past 1616, the 11 day of December, at the Suns entrance in the first minute of Capricornus, making the shortest day and longest night in the yeare, which endureth untill the 10 day of March, whilst the Sun maketh his course through ♋ and ♌ which quarter of his naturall inclination is colde and moist; the colde prevaileth above moisture the Sunne being in Capricornus: and it is equally colde and moist the Sun being in Aquarius; and the Sunne in Pisces, it is more moist then colde, the aire is darkned and mens bodies were weake and faint.

In this quarter use more quantitie of meate and lesse drinke, & exercise the body strongly, use sweete

A Prognostication.

Wines, and meats hot and drie, flesh and fish dried, few swete smelling things, and warme drinke: haue a speciall regard of the morning and evening cold, and keepe the head and feet warme and drie.

Diseases and sicknesses of this quarter are these or such like: many Chronicall or long diseases, as consumptions, tiffikes, coughs, hoarsenes, retumes toothach, quartaine feuers, with diseases in the head and eyes, and much sickness to aged people.

The disposition of the weather in this quarter, in my opinion, wil be somewhat cold and windy, with some store of frostes and snowe extraordinary, as appeareth in the iudgement of the weather, according to the most soyceable aspects of the Planets following.

Of the Spring.

© in γ δ π

The spring beginneth this yeare vppon the 10 day of March, at 10 a clocke in the forenoone, when the Sun enters into the first minute of Aries, making the vernal Equinoctiall, the daies and nights equall: which time being come, eate more and drinke lesse, it is good to take Physicke to purge and bath, for as saith Cornelius Celsus: the spring is the most wholsome season of the yeare, then the winter next, more dangerous is the summer season; but farre more perilous is the Autumne quarter, for almost for the most part at þone time then it is hot, and in the nights, mornings, & eueninges

It is colde; from whence it cometh to passe that many are suddenly oppressed with sicknesse, by meanes of the distemperature and inclination of the aire: if thou now feele thy body oppressed with grief or sicknes, resort to the learned for counsel, aswel to prevent diseases and sickneses like to ensue, as to cure those that have taken deepe roote, and gotten the upper hand of nature: in this quarter, Bloud naturally hath Dominion, which humour then-aigneth especially, and therefore it is good to be let bloud if neede shall require.

The diseases and sickneses ordinarily proceeding are hot burning Feuers, Pleurisses, Apostumes, Squinancy; hot Malignant Ulcers, Morbus Gallicus, Scabbs, Itch, Tooth-ach, paine in the head Joints and Limbes.

Upon the 25 day of March is celebrated the feast of the annunciation of Saint Mary the virgin, or rather according to Ranzouius, in his Calendarium fere perpetuum; the conception and incarnation of our blessed Lord and Saviour Jesus Christ, where the Equinoctial of the spring was in the time of Iulius and Augustus Cæsar.

The same day of the Month was Christ crucified in the 34 yeare from his Incarnation or birth, being Friday, where he was mocked, spitted upon, buffeted, blindfolded, accused, condemned, crucified, was dead and buried, and rose againe the third day, which is our Sunday or Saboth day: for vpon

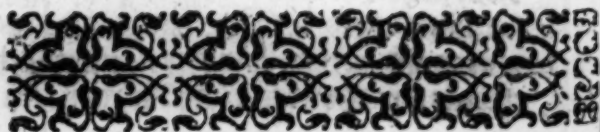

A prognostication.

pon the Jewes day of preparing the pasteruer, which was our Friday, at the 6 houre he was crucified, and in the 9 houre which is our 3 houre in the afternoone he was dead, and before the Sunne setting he was buried.

This was the first day, which he lay in the Sepulcher, about 3 houres, for at the 6 houre he was crucified, and in the 9 he yielded up the Ghost; for the Jewes begin their day, from the evening, by the Authozitie of Moses which saith, that the Evening and the Morning were the day; so Christ was conceived & crucified in the vernal Equinoctial, and bozne in the winter Solstitium.

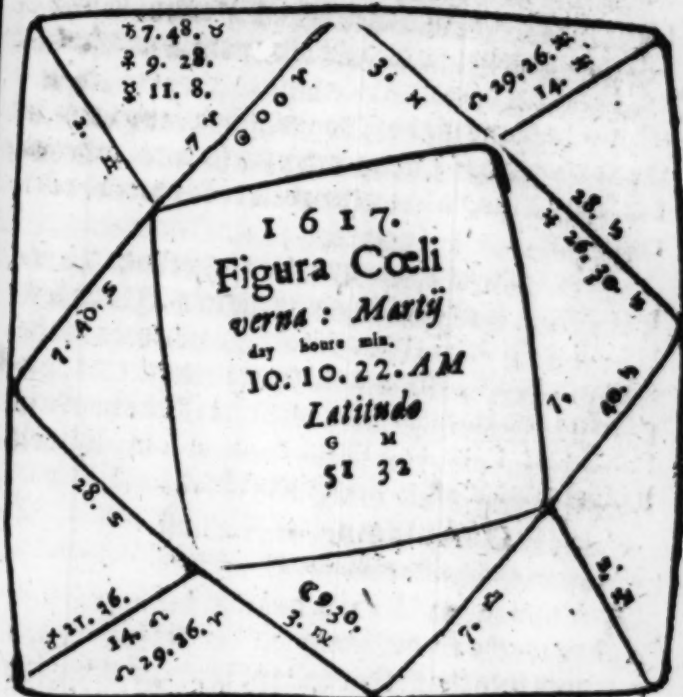

These things saith Ranzouius, I haue rehearsed as I haue gathered them from diuers Authours: but if any man bring any moze certaine pzoofes saith he, I will giue place, not meaning to defend conceined opinions, against pzooued trutthes.

Heere

Johnson, 1617.

Here followeth a Coelestiall figure of the hea-
uens, at the Suns entrance into the first minute of Aries,
March the 10. day, at 10. a clock, and 22. minutes
in the forenoone. 1617.

Of Sommer:

Sommer, after our English accompt, beghineth
this yeare the 12 day of Iune 1616. making the
longest day and shortest night in the yeare.

The body now desires more to drinke then to
eat,

A Prognostication.

estate, whereby dangerous sursets are bred by meane of extreame thirst and excessive drinking, the body being ouer hot: vse meates and drinckes sharpe and cooling, but not so cold that the estate of the body be altered by them: yellow Choller now hath Dominion, therefore beware of bleeding or purging, especially in the Canicular or Dogge daies; any wound then taken is dangerous and hard to cure; and because Summer is hot and dry, let your diet be cold and moist.

The diseases of this quarter are, yellow Jaundies, small Pox, hot burning Agues, Postules, Scabbes, Itch, Tetters, Blisters, and sores in the Mouth, with Fluxes and other immoderate purgations and sweats. The weather is like to proue somewhat faire and warme, with some sudden hotwets and windes more then vsuall.

Of Autumne, or Haruest.

☉ in ♌ m. 8

Autumne, or Haruest quarter beginneth this yeare the 13 day of September, at the Sunnes entrance into the first minute of Libra, making the Autumnall Equinoctiall, the daies and nights of equal length, the daies decreasing, and the nights increasing: the season wareth colde, and North windes arise, Rivers increase, leaves fall from Trees, and the earth loseth all his beautifull habite, flying Fowles betake themselves into hot regions, and Serpents to their caves and dens: vse more quan.

quantitie of meat and drier then before, drinke lesse, but more sweete drinckes; elshew the morning and evening colde, & beware of eating overmuch fruits, lest by their euill iuice the body be corrupted: Autumne is colde and dry, therefore let your diet be hot and moist.

The diseases subiect to this quarter, are thes, such like, Rumes, Hoarsenes, Coughes, Poles, Consumptions, quartaine Agues, With ach, paines in the Joints and Limbes, with inflammations &c. The weather is like to be wet in the beginning, & windy in the middle, and the latter part somewhat colde with frostes.

Predictions of Dearth and Plenty, gathered from the disposition of the toure quarters or seasons of the yeare.

If there fall much raine in the spring, it foze- sheweth putrifaction of the fruites of the Earth, and those to be small in quantitie, and abundance of vnprofitable hearbes and weedes, for the budding and flowering Trees, and other fruites growing out of the earth, are hurt, hindred and rotted by overmuch moisture, by reason that the colde of winter is not yet full extinguished and taken away, which hurteth the fruites and seedes of the earth, and hindreth their growing and increase.

If there doe happen much heats in the spring, it sheweth the earth and trees will soone peelee forth their fruites, and blossomes; and the first fruites of the

A Prognostication.

the spring, as Cherries, Strawberries & such like will sone be ripe: especially Cherries, they will bring forth wormes in hot Countries: but this neuer hapneth with vs in England, but in hotter Countries very often. A hot spring maketh Roses plentiful, and they will appeare quickly before the time, and those not much sweete nor medicinable, for a faire and hot spring yeeldes no great store of fruites: if there happen much colde and drought in the spring, and some frostes happen to fall about the full Moone in the end of the spring, then there is like to be small store of fruit that yeare, and Wine and Buttes will be very scarce.

If the spring be very dry, and not extreme hot, it sheweth small store of fruites, but very good, and Corne peraduenture will be scarce: if the spring prove very cold, there will be small store of fruites, which will ripen very slow, and prove small, and fall from the trees before they ripen.

Iudgement from Sommer.

If there happen abundance of raine in Sommer, it will putrifie and rot the fruits of the earth, and there will be no great store of Corne, and many diseases will then raigne.

If Sommer prove extraordinary dry, there will be small store of Corne, but it will be very good: for then the fruites of Sommer will be the purer, and more healthfull, and Corne more yeeldable of increase

crease: for, the Proverbe is, a dry Sommer neuer doth hurt, yet Fishes will decay by reason of the corruption of the waters, and then will raigne many sharpe sickenesses and diseases.

If Sommer exceede in heate, there will be many diseases, and great plenty of Sommer fruites and Wines will then be very good, and pure.

If Sommer prove very cold, the yeare will be very healthfull, and fruites plentiful: but somewhat of a clammy or roseny substance.

Coniectures from Autumne.

If there fall much raine in Autumne, it spoileth Wines, by reason it rots the Grapes, and causeth the Wines to be bad, by reason of the quantity of water that is gathered with the Grapes, and mingled with the Wine: so that next spring is expected bad Wines.

If the latter part of Autumne prove very moist, there will be scarcity of Cozne in the yeare following, by reason it hindereth sowing, and rotteth the seede sown in the Earth.

If extreme dry in the first part, it sheweth also scarcity of Graine: a meane is alwaies best between dry and moist.

If Autumne prove extraordinary hot, it signifieth plenty of diseases and sickenesses.

If extreme cold, it spoileth the fruites of the earth in their quantity, smell, and taste.

Signes,

A Prognostication.

Signes of Plenty or Dearth, taken from
the VVinter quarter.

A Cold and dry Winter, is the best signe of plenty: for Winter extraordinary cold, killeth the fruites of the Earth, and spoileth fruit. Trees, especially those that delight in a hot ground, as the Pomgranate, the Figge, the Orenge, and Lemmon, and other of like nature.

A hot and moist Winter is pestilentiall, and full of sickenesses and diseases, and very vnhealthfull, and hurteth Cozne: for ouermuch moisture rotteth the seede, but indifferent quantity of Snow in Autumne quarter, maketh the Earth fruitfull, and bringeth forth abundance of all fruits of the Earth: for the Snow heateth the Earth, and killeth wormes, which spoile the seedes: for note this alwaies that any extraordinary distemperature of the Aire in any quarter of the yere, is an euill signe.

Of Windes.

A Great quantity of windes is hurtfull to fruits and seedes of the Earth, and little winde stirring all the yere, is a signe of the pestilence.

Eudoxus saith; that he hath proued by long experience, which Pliny oft reciteth, that in one and the selfe-same place, the windes and tempests doe concurre almost exactly, to the same daies every fourth yere, because every fourth yere the Planets returne almost to the same signes, and from thence
produce

produce the like effects.

The South wind is hot and moist, and is likened to the Aire, sanguine, full of lightning; it causeth store of rain, and increaseth Clouds, the Dew, the Dew, and ingendzeth many burning sicknesses. The North wind is opposite to the South wind, and is cold and dry, melancholike, and is compared to the Earth, chasing away raine: it preserveth health, it causeth dry cold weather, and hurteth flowers and fruites of the Earth, it causeth frost and Snow.

The East wind is fiery, cholericke, hot, and dry, temperate, sweet, pure, and subtil, penetrating: it ingendzeth cloudes, and preserveth mens bodies in health, but here it spoileth fruit trees by his sharpnes: and if it chance to raine about the Sunne rising, the wind being in the East, soz the most part it continueth with distilling cloudes, untill 24. houres be expired, as I have often observed.

The West wind is cold and moist, phlegmaticke, it looseneth, and unbindeth the cold frostes and snowes, it bringeth forth flowers, it ingendzeth operations, and other plethorlike sicknesses, raines and thunders. These are three causes rehearsed of the ceasing of windes.

The first is the burning heate of the Sunne, by which the vapour is consumed and extinguished.

The second is the inward cold, by which the pores of the Earth are shut up, and the exhalation cannot

A Prognostication.

cannot breath forth.

The third cause is showers of raine and moisture, which fillet the pores of the Earth, and shutteth up the spirit conceived within the Earth, and beateth downe the exhalation, not suffering it to ascend: but according to the Scripture, the winde bloweth where it listeth, and no man can tell from whence it cometh: but these are the causes naturall of the winde, and the place where it is thought to be engendred, the variety and sudden mutability whereof maketh the iudgement of the weather most vncertaine here in England: for as we find by experience, euery wind hath his peculiar weather.

Iudgements of sicknesses and diseases from the Spring.

The Spring time tempestuous and dry, with store of North windes, threatens death to old people and diseases, abortion to women with child, and to those that are of nature phlegmaticke it threatneth bloody fluxes in the Summer following, loosnes of the belly, and distillation of flume out of the head into the stomacke, with griefe of the inward parts of the body, and to the chollerick complexion, inflammation of the eyes.

The Spring ouer moist, breedeth diuers diseases and sicknesses in the Summer following, as burning Feuers, Frenies, Impostumations, and diseases hard to cure.

The

Johnson. 1617.

The Spring very cold, with much raine, and South winds, increaseth putrifaction, and breedeth pestilentiall Feuers.

Coniectures of Diseases, taken from
the Sommer quarter.

Sommer extraordinary hot and dry, engendzeth Soiners diseases and sickenesses, as burning Feuers, paines in the head, and inflamations in the face and eyes.

Sommer hot and moist, increaseth putrifaction, with diseases thence proceeding, as burning fevers, Fluxes, and Feuers pꝛecuring much sweat, and pestilentiall.

A cold Sommer is good for the chollericke, if that the humoꝝ giueth way and purgeth.

Sommer dry, with plenty of North winds, is good for the flegmaticke.

Signes of Sickneses taken from
Autumne quarter.

Autumne, of all times in the yere, is most pernicious and dangerous, because then raigneth many sharpe sickenesses and diseases, as hurtfull coughes, distillations, pleurisies, apoplexies, and such like. North wind and dry weather, hurteth the chollericke of complexion, and causeth them to haue blazed eyes, and sharpe fevers, with opilation of the breast and head, with overflowing of blacke choller: but it is good for Women, and flegmaticke persons.

A Prognostication,

A moist Autumne is healthfull to mens bodies, but if it excede in moisture from the beginning to the end, it causeth opilations in the head very much, and in the Winter following, it engendzeth many coughes, hoarsenesse, and vehement distillations, with paine in the head and eyes.

Iudgements taken from the Winter Quarter.

If Winter keepeth the ordinary temperature, it signifieth no great sickneses or diseases, but onely paine in the head, hoarsenes, coughes, which are the symptomes of fulnes of the head.

If North winds and dry, it prouoketh coughes, retention of the bowels, distury and paine in the breast and stomacke.

If Winter be ouer moist, it ingendzeth plenty of watry humours and diseases there from proceeding, as the dropsie, and such like.

*Frustriferat ventus ualcentia, temperat ærum;
Ventorum status vi regit ipse Deus.*

Hcers

Johnson. 1617.

Heere followeth the quarterly disposition of
the weather for euery quarter of the Moon,
according to the most forcible aspects of the
Planets amongst themselves this
yeare 1617.

Of Ianuarie.

Fœcundos Ianus Calicas, escamque repensam

Voscit: at arcenda est corpore segnitie

Vena tibi nullum spargat tum lecta cruorem:

Tunc datur, vt longo membra sopore iuues.

First quarter the fourth day at five a clocke and 20 minutes in the morning: ☿ of 4 and ♀ the 7 day strong winde.

Full moone the Eleuenth day at six a clocke and three minutes at night. ☿ of 7 and ☉, cold with frost and snow.

The eighteenth day ☿ of 7 and ♀ and ☉ of 7 and ♀. cold, with raine and darke cloudie weather.

Last quarter the nineteenth day, at eleven of the clocke and twenty minutes at night, a colde quarter with winde and frosts.

Neto Moone the twenty seauen day, at nine minutes in the morning: colde and indifferent weather.

Of February.

Frigora solvuntur tandem, nix alta quiescit,

Frigore, pisce, ferinaque abstina, aromata vina

Elige: dehinc sanguis sanior vt sit age

Pharmaca, Clisteres, thermas amplius: vnam

B

No

A Prognostication.

Ne tussis aut febris corripiare, seca
Pharmaca nunc hauri, nunc seinde in pollice venam
Et callido mulum humine membra foue.

First quarter the second day at foure a clock in the
laternoone: of ♄ & the third day windes and cloudes,
for the most part tempestuous weather, ninth day the
☉ and ♄ windie and drie.

Full Moone the tenth day, fortye ix minutes after noone,
windie and faire hot weather.

Last quarter the eighteenth day at three a clocke and
thirteene minutes after noone; very faire weather.

New moone the twenty five day at ten a clocke in the
forenoone: faire seasonable weather.

Of March.

Ut corpus foveas, vt Balnea saepe nitres,
Sis memor, ast vinum nunc veneremque fuge,
Iam puris te palce cibis & pharmaca, linque,
Quin etiam venæ sectio saepe nocet.
Cum siccus fuerit, bona tempora denotat anni,
Marius, et frugum fertilitate beat.

First quarter the fourth day. at foure a clock, and thwen-
ty three minutes in the morning of ♄ and ♀ the 8. day
cold, with raine and moisture.

Full Moone the twelfth day at seauen a clocke in the
morning, somewhat windie and wet of ☉ & the threteenth
day.

Last quarter the twentieth day at three a clocke and ten
minutes in the morning: ☉ of ♄ and ♀ the twentieth day
windie and hot.

New

Iohnson. 1617.

New Moone the twenty five day at five a clocke, and
fifty five minutes at night; ☿ of ☉ and ♃ colde and
wet.

Of Aprill.

Tum bonus est annus, feliciter omnia crescunt,

Replentur cellæ ac horrea læta simul.

Martius exsiccat cum terram, humectat Aprilis,

Frigidulumque sequens æra maius nomen.

First quarter the second day three minutes before seven a
clocke at night, faire seasonable weather.

Full Moone the tenth day, twenty foure minutes before
midnight, ☿ ☿ very faire and seasonable, warme weather,
with some windes.

Last quarter the eighteenth day at eleuen a clocke and
fifty five minutes in the forenoone; the latter part coole
and wet.

New Moone the twenty five day at three a clocke, and
twenty seven minutes in the morning; ☿ of ☉ and ♃ colde
and wet, change, with windes in this quarter:

Of May.

Mensis vbi fuerit Martis sub nube serenus,

Et contra pluuiis scetus Aprilis aquis.

Frigora si Maius secum trahat, aureus annus

Tunc tibi, et omnigenis fructibus vber erit.

First quarter the second day at eleuen a clock, and sea-
uenteene minutes in the forenoone; ☿ of ♃ and ♀ the

A Prognostication.

Ninth day winde and raine, with cold East winde.

Full Moone the tenth day at one a clock and nineteene minutes in the after noone; ☉ and ☽ the fifteenth day winde and dry, hot weather, and many times tempestuous.

Last quarter the seuenteenth day at six a clock in the afternoone; ☉ and ☿ The eighteenth day winde and moisture.

New Moone the twenty foure day, at twenty foure minutes in the after noone: faire & seasonable weather for the most part.

Of Inne.

Cum calor & pluuiz cœunt & stare frequenter,

Agricola racinâ, gaudia mente fouent;

A rebus callidis, motu vehemente, gulaque

Abstine, frigida ede, venam aperire caue.

First quarter the first day at foure a clock and forty seauen minutes in the Morning; faire and warme weather.

Full Moone the eighth day forty six minutes after midnight ☉ of 4 ☿ The eighth day a faire and seasonable time, with some small showers.

Last quarter the 15 day, at eleauen a clock at night: ☉ of 2 and ☿ and ☉ of 4. and ☿ The 18 and 19 daies great windes and raine.

New Moone twenty two day at ten a clocke and forty nine minutes at night: faire warme weather for the most part.

First quarter the last day at ten a clocke and thirteene minutes at night: hot weather and showers.

Of

Johnson. 1617.

Of July.

Iulius exardens porumque escamque requirit,
Frigentes, mensam pisces olusque oneret.
Tunc vndis te inerge, vigent tunc balnea, venam
Comprime, nec veneris noxia fuita pere.

Full Moone the eighth day, at ten a clock & thirty six minutes before noone, ☉ & ☿ The sixth day thunder and Showers.

Last quarter the fifteenth day at three a clock and 53 minutes in the morning: ☉ & ☿ the sixteenth day wind and some small Showers.

New Moone the twenty two day at 11 a clock and 15 minutes in the forenoone: hot weather.

First quarter the 30 day, at two a clock & forty minutes after noone: ☉ of ☿ & raine and Showers.

Of August.

Si non ægrotas, tibi nunc loquere memento
Sanguinis in toto corpore quicquid habes:
Sectio namque nocet venæ, nec aromata profunt,
Hæc igitur cautè sunt fugienda tibi.
Plura reconvalescenti viranta hoc tempore profunt,
Nempe diurna quies, balnea, vina, Venus.

Full Moone the 6 day at 7 a clock and nineteene minutes at night: hot weather and tempestuous Showers.

Last quarter the 13 day, at ten a clock and 19 minutes in the forenoone ☉ & ☿ thunder and tempestuous weather.

New Moone the 21 day at two a clock and 5 minutes in the morning, ☉ & ☿ 18 and ☉ of ☿ and ☿: wind and Showers: but warme weather.

A Prognostication.

First quarter the 29 day at five a clock and 33 minutes
in the morning; faire and warme weather.

Of September.

Indulge hic genio, medicamina sume, cruorem
Venus mitte, cutem scarificato, laua.

Poma, ferina, et apes prosunt: sic vina venusque,
Parce sumpta tamen: nam nimium omne nocet.

Full Moone the 5 day at 3 a clock and 44 minutes in the
morning: ☾ ☿. winde and raine.

Last quarter the 11 day at 7 a clock and 30 minutes at
night, faire and seasonable weather for the time.

New Moone the 19 day at 6 a clock and 51 minutes at
night: ☐ of ♄ and ♀. Some fine fall of raine about the new
Moone the 21 day ☐ of ♄ and ♀ and ☐ of ♄ and ♀ wind and
raine.

First quarter the 27 day at 6 of the clock and 50 minutes
at night; windie and drie weather.

Of October.

Me iuvet ex culæ committere semina terræ,

Tempore quò possint fructificare suo.

Cum redit October, redeunt quoque frigus et horror:

Est igitur fornax calfacienda tibi.

Full Moone the 4 day 18 minutes before noone, ☐ ☿ ♄:
The 7 day drie windes, and faire cleere weather:

Last quarter the 11 day at eight a clocke, and thirty two
minutes in the forenoone; faire seed time, & somewhat cold.

New Moone the 19 day 37 minutes after noone, faire
and seasonable weather, with small showers.

First quarter the 27 day halfe an houre past 6 a clocke
in the morning, cold and frosts: this moneth is like to
proue

Johnson. 1617.

more very kindly, according to the season of the year:

Of November.

Esse salutaris perhibetur mulla Nouembri,
Zinziber et dulci flicite melle Natans,
Tum neque sepe laues, Veneris neque sacra frequentes,
Ante senex tempus ne videre tuum.

Full Moone the 2 day at 10 of the clocke at night, ° 0 3:
cold, raine, and fleete.

Last quarter the tenth day at two of the clock in the morning coide and frosts.

New Moone the 18 day at six a clock and 15 minutes in the morning; ° 7 4 The 19 day winde, frost, and colde of fleete. □ of 4 8 The 20 day more temperate weather with small bill howers.

First quarter the 25 day, halfe an hower past foure a clock in the after noone small frosts.

Of December.

Esce ante focum calidis vtare Decembri.

Valde olus et lac sunt tunc fugienda tibi,

Tunc vino Venerique indulge, et Aromate multo

Sparge cibos, artus sepe labore dorna.

Full Moone the second day at 9 a clock & 21 minutes before noone: the 5 day ° of 3 and 8 cold with frost & snow

Last quarter the 9 day at 10 a clock and 34 minutes at night, cold and frost.

New Moone the 17 day about 11 of the clock at night, faire and seasonable weather.

First quarter the 25 day at one a clock and 4 minutes in the morning; faire weather.

Full Moone the last day at eleuen a clocke at night, fine windes at the going out of the year.

FINIS,
